

Net Zero Target Policy

Green Transfo SAS

Doc No: P.104 | P.Date: 27.01.2023 | Rev.Date: 27.01.2023 | Rev.No: 00

Date: 27/01/2023

At **Green Transfo SAS**, we recognize the urgent need to address the global challenge of climate change. We are committed to reducing our greenhouse gas emissions and working towards a sustainable future.

As part of this commitment, we have set a target to achieve net zero emissions across our operations and supply chain. This target is in line with the goals of the Paris Agreement and the recommendations of the Intergovernmental Panel on Climate Change. We understand that achieving this goal will require significant effort and collaboration, and we are committed to working closely with our employees, suppliers, and other stakeholders to achieve this target.

A- Scope:

This net-zero target applies to **Green Transfo SAS**'s direct operations and indirect emissions (Scope 1, 2 and 3 emissions as defined by the Greenhouse Gas Protocol) and includes emissions from energy use, transportation, and waste.

B- Methodology:

To achieve this target, **Green Transfo SAS** will implement a combination of measures including:

- a- Energy efficiency improvements: We will invest in energy-efficient technologies and practices to reduce our energy consumption and greenhouse gas emissions.
- b- Renewable energy: We will increase our use of renewable energy sources, such as solar and wind, to power our operations.
- c- Carbon offsetting: We will purchase carbon offsets to offset any emissions that we are unable to reduce through efficiency and renewable energy measures.
- d- Sustainable transportation: We will promote sustainable transportation options, such as electric vehicles, and encourage employees to reduce their transportation-related emissions.
- e- Sustainable procurement: We will prioritize the procurement of goods and services from suppliers who have committed to reducing their own greenhouse gas emissions and have sustainable practices in place.
- f- Stakeholder engagement: We will engage with our stakeholders, including employees, customers, and suppliers, to raise awareness of our net-zero target and to gather input and support for our efforts.
- g- Reporting and transparency: We will report on our progress towards our net-zero target on an annual basis and will disclose our greenhouse gas emissions in accordance with recognized reporting standards such as the Greenhouse Gas Protocol.

Implementation and Timeline:

Green Transfo SAS will develop and implement a detailed plan to achieve our net-zero target. This plan will include specific, measurable, and achievable targets and milestones, as well as the resources and support needed to achieve them. We will regularly review and update our plan to ensure that it remains aligned with the latest scientific and technological developments and best practices.

Conclusion:

Achieving net-zero greenhouse gas emissions is a significant challenge, but one that **Green Transfo SAS** is committed to meeting. We recognize that addressing climate change is not only a moral and social responsibility, but also an opportunity to improve our operations, reduce costs, and create a sustainable future for our business and society as a whole.
